01 Executive Summary

CliqHealth is an AI-powered preventive health intelligence platform. The product is fully built, live, and serving 1,000+ real users acquired without a single pound of paid marketing. Seven AI modules cover the highest-burden preventable conditions in the UK: type 2 diabetes, cardiovascular disease, cancer survivorship, mental wellbeing, nutrition, fitness, and medication management.

This raise is not about building something. It is about selling something that already works. The £250,000 funds a precise 12-month programme: hiring commercial hires and executing paid pilots across three simultaneous B2B channels. 90% of funds go directly to pilot rollout and the people who will close it.

7	1,000+	£0	£50K
Live AI Modules	**Organic Users**	**Paid Marketing**	**Founder Investment**
Fully deployed. Zero dev spend.	Zero paid acquisition	All growth organic to date	Personal capital. Zero salary.

Investment Highlights

- **BUILT:** Product fully built with 7 live AI modules. No development risk.
- **TRACTION:** 1,000+ organic users. Zero paid acquisition. Zero external marketing.
- **CHANNELS:** Three simultaneous B2B pilot channels from day one: Insurance, Enterprise, Gym.
- **ECONOMICS:** 100K-member insurance rollout generates £6M per year at £5 PMPM per insurer.
- **VALUATION:** £2.5M post-money. 63% below the 2026 pre-seed median of £6.7M.
- **FOUNDER:** Founder invested £50K personal capital. Zero salary. Built from a hospital bed.
- **PIPELINE:** InsurTech UK partner. Active insurer conversations. SADAH.uk integration.
- **UPSIDE:** £159.6M projected Year 5 revenue at conservative three-channel assumptions.

The Three B2B Channels

Same platform. Same seven AI modules. Three markets. Insurance partners get 100,000-member rollout potential generating £6M per year at the core pricing tier. Enterprise employers get a measurable employee health benefit. Gym and wellness operators get clinical-grade member retention tools. Every channel is served by what is already built.

02 Founder Story

Christy Samuel founded CliqHealth from a hospital bed. In 2021, while undergoing cancer treatment, she had the time and the firsthand experience to see exactly what was missing from the digital health ecosystem: a single platform that integrated every dimension of a person's health, built around prevention, not reaction.

Before CliqHealth, Christy spent 12 years in enterprise technology at AWS and Deloitte, architecting data platforms, leading complex technical programmes, and delivering commercial outcomes at scale. She knows how enterprise software gets sold, how insurance companies evaluate risk technology, and how to build infrastructure that holds under load. That background is baked into CliqHealth's architecture and commercial approach.

She has invested £50,000 of personal capital into CliqHealth. She has drawn zero salary. She bootstrapped the full product build, the clinical validation work, and the first 1,000 users without external funding. That is not stubbornness. It is proof that the platform does not require constant capital injections to function. When the funding arrives, it goes to commercial execution, not survival.

Cancer Survivor
Built from lived experience, not a whiteboard.

12+
Years at AWS and Deloitte

£50K
Personal Capital
Zero salary drawn.

Hospital
to Live Platform
No external funding. No team. Built alone.

Why this matters to investors

A founder who has already built the product with personal capital, drawn zero salary, and acquired 1,000+ users organically is not a risk question. It is a commitment question. Christy Samuel has answered it. This raise funds commercial acceleration, not founder validation.

03 The Problem

The UK healthcare system is built to treat disease after it happens. The economics of that model are breaking down. Chronic conditions that are largely preventable; type 2 diabetes, cardiovascular disease, cancer; are consuming an ever-larger share of NHS and private insurer expenditure, with no structural mechanism to slow it.

£14B	90%	75%
Annual Diabetes Burden	**CVD is Preventable**	**Cancer Deaths Preventable**
UK NHS direct + indirect costs	Yet treated reactively at great cost	Through lifestyle intervention

Diabetes

- 4.4 million people in the UK live with diabetes. 90% have Type 2, which is largely preventable.
- UK diabetes costs the NHS £10.7B per year in direct expenditure, plus £3.3B in indirect costs, a £14B total burden.
- 3.9 million additional people are at high risk of Type 2 and receive no structured preventive support.
- 68% of Type 2 diabetes cases are preventable or significantly delayable through structured lifestyle intervention.

Cardiovascular Disease

- CVD is the leading cause of death globally 17.9 million deaths per year.
- 90% of cardiovascular disease is preventable through lifestyle intervention. Most health systems address it reactively.
- The digital health market for cardiovascular management: $49.64B in 2026, growing at 22.9% CAGR to $187.6B by 2032.
- UK insurers face rising CVD claims as preventable cardiac events dominate hospital admission data.

Cancer

- 75% of cancer deaths are linked to preventable lifestyle factors: poor nutrition, physical inactivity, smoking, and alcohol.
- Cancer survivorship management market: $2.29B in 2026, projected to reach $4.48B by 2032 at 10.1% CAGR.
- Long-term survivorship support is chronically underfunded in both the NHS and private insurance.

The Gym and Wellness Gap

UK health and fitness clubs serve over 10 million members. The vast majority receive generic fitness guidance with no condition-specific prevention support. Gyms face persistent member churn yet have no clinical-grade retention tools tied to measurable health outcomes. The highest-value, highest-loyalty gym segment members managing diabetes, CVD risk, or cancer recovery is entirely underserved.

The System-Level Failure

The NHS spends £14B per year on diabetes alone. UK private insurers spend billions annually on conditions that are 68-90% preventable. Employers absorb 130 million sick days per year at a cost of £30B. Every one of these numbers represents a budget already allocated, already spent and already available to a platform that proves it can prevent the underlying conditions.

04 The Solution — Seven Live AI Modules

CliqHealth is an AI-powered preventive health intelligence platform. It combines machine learning, clinical nutrition science, wearable data integration, and behavioural science to deliver personalised health pathways at scale. The platform is built and live today and architected to operate as a white-label or integrated solution for insurers, employers, and gym operators.

The Seven Live AI Modules

Module	Clinical Focus	Commercial Value
1. Diabetes Prevention	Structured lifestyle pathway, blood glucose tracking, dietary intervention.	Core insurer ROI driver. £14B NHS burden addressable.
2. Cardiovascular Health	Heart health monitoring, BP tracking, lifestyle risk scoring.	$49.6B digital CVD market. 90% preventable.
3. Cancer Survivorship	Post-treatment recovery pathways, nutrition and activity management.	Underserved £4.48B market. Built from founder lived experience.
4. Mental Wellbeing	Stress management, sleep tracking, mood and resilience tools.	Top employer benefit driver. Demonstrable sick-day reduction.
5. Clinical Nutrition	AI meal planning, dietitian-validated, food waste reduction feature.	Unique: fridge/pantry snapshot generates meals from existing stock.
6. Fitness and Movement	Personalised exercise plans, wearable integration across major platforms.	Gym and wellness channel primary retention and engagement driver.
7. Medication Management	Adherence tracking, interaction alerts, GP-friendly clinical summaries.	Insurer-grade outcomes reporting. Compliance differentiator.

Platform Architecture

- AI-personalised health pathways adapting in real time to user data and outcomes
- Wearable integration: Apple Health, Google Fit, Garmin, Fitbit
- Clinical nutrition engine validated by registered dietitians
- Enterprise data architecture: DTAC-aligned, MHRA guidance compliant
- Outcomes reporting dashboard for insurer and employer cohort analytics
- White-label and API capability across all three B2B channels
- ISO 27001 preparation underway
- Food waste: photograph fridge/pantry, AI generates meals from existing ingredients

Food Waste Reduction — A Unique Differentiator

CliqHealth users photograph their fridge or pantry, and the AI nutrition engine generates personalised meal plans from ingredients already at home. The UK wastes 9.5 million tonnes of food annually. CliqHealth directly reduces that waste at the household level while improving dietary adherence because the plan works around what users actually have. No comparable platform offers this.

Cancer Giving Back — Charity Integration

A meaningful portion of every CliqHealth subscription supports UK cancer charities, chosen by the user. This is embedded in the product from day one, driven by the founder's own survivorship journey. It creates genuine user loyalty and brand distinctiveness that no competitor can easily replicate.

Women's Health — Future Phase Q1 2027 Only

Women's health is a significant planned module scheduled for Q1 2027, after the pilot programme delivers its first commercial contracts. It is not part of this raise or the 12-month plan.

05 Business Model and Revenue Architecture

CliqHealth operates a three-channel B2B commercial model with a supporting B2C tier. All three B2B channels use the same live platform, the same seven AI modules, and generate recurring per-member-per-month revenue. The raise funds simultaneous pilot launch across all three channels within 12 months.

B2B Channel 1: Insurance (Primary Channel)

Insurance is the highest-value, highest-scalability route to market. The commercial pathway runs three stages: a 90-day proof-of-concept pilot, a 12-month paid contract, and a full rollout to 100,000 members per insurer.

Stage	Members	Duration	Revenue	Objective
POC Pilot	2,000 to 5,000	90 days	Free (evidence collection)	Establish clinical outcomes data
Initial Contract	2,000 to 5,000	12 months	£3 to £8 PMPM	Prove ROI to insurer decision-makers
Full Rollout	100,000	12+ months ongoing	£6M per year at £5 PMPM	Scale across full policy base

Insurance Channel Economics at 100,000 Members

Pricing Tier	PMPM	1 Insurer / Year	2 Insurers	5 Insurers	12 Insurers
Standard	£3	£3.6M	£7.2M	£18M	£43.2M
Core	£5	£6.0M	£12.0M	£30.0M	£72.0M
Premium + Analytics	£8	£9.6M	£19.2M	£48.0M	£115.2M

Why insurers will pay

UK private health insurers pay out on the same preventable conditions year after year. A platform that demonstrably reduces cardiovascular claims, diabetes-related admissions, and cancer complications has a clear ROI case. Comparable digital prevention programmes deliver 24% reduction in overall healthcare costs and 36% fewer unplanned hospital admissions.

B2B Channel 2: Enterprise Employers

CliqHealth operates as an employee health benefit, deployed via HR platforms or standalone. Enterprise pilots launch at 2,000 to 5,000 employees with annual renewal economics.

- Pilot size: 2,000 to 5,000 employees per employer
- Pricing: £5 to £8 PMPM, contracts renewable annually
- Value: Measurable reduction in sick days, absenteeism, and long-term health claims
- Deployment: Via HR platforms or standalone; white-label capability available

B2B Channel 3: Gym and Wellness Partners

Gym and wellness operators represent the third B2B channel a direct-to-member deployment extending CliqHealth's clinical-grade prevention tools into a consumer health setting.

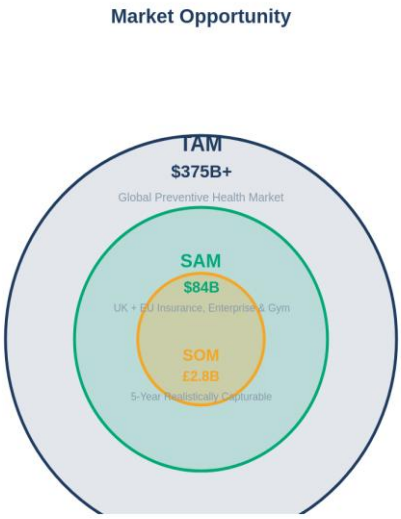

- Pilot size: 2,000 to 5,000 gym members per site
- Pricing: £3 to £5 PMPM, platform as a wellness benefit integrated with gym membership
- Value: Clinical-grade condition support increases member retention and differentiates gym offerings
- Scale: Multi-site rollout across gym chains once single-site pilot data is established

Channel	Pricing	Year 1 Members	Year 1 ARR	Year 5 Potential
Insurance (2 partners)	£5 PMPM core	100K per insurer	£3.6M (50% realisation)	£72M at 12 partners
Enterprise	£6 PMPM avg	25,000	£750K (6 months active)	£17.5M at 350K employees
Gym / Wellness	£4 PMPM avg	10,000	£180K (6 months active)	£9M at 300K members
B2C Direct	Varies	Growing	£70K baseline	£61M at scale + network

06 Market Opportunity

The addressable market for CliqHealth is anchored on three conditions and the three B2B ecosystems that pay to prevent them. All market data uses 2026 figures. The market landscape is the most favourable the preventive health sector has seen.

Market Segment	2026 Value	2032 Projection	CAGR
Digital Diabetes Management	$26.5B	$79.6B	18.2%
Digital Cardiovascular Health	$49.6B	$187.6B	22.9%
Cancer Survivorship Management	$2.3B	$4.5B	10.1%
Digital Mental Health	$6.9B	$17.5B	16.5%
Gym and Wellness Technology	$14.7B	$32.8B	14.3%
InsurTech UK Market	$8.2B	$26.5B	21.6%
TOTAL: Preventive Health TAM	$375B+	$600B+	18%+

TAM / SAM / SOM

TAM: $375B+ — Global preventive health technology across all verticals and geographies.

SAM: $84B — UK and EU insurance, enterprise, and gym/wellness channels addressable via B2B SaaS.

SOM: £2.8B — Realistically capturable in Years 1 to 5 given CliqHealth's pilot programme and channel strategy.

Why 2026 Is the Right Moment

- UK insurers actively seeking digital health solutions to reduce claims
- NICE and NHS England formally endorsed digital preventive health pathways
- Employers face £30B annual sick-day cost, preventive benefits now board-level priority
- AI health technology reached clinical-grade reliability for insurer-grade reporting

07 Traction and Partnerships

CliqHealth has been live since launch with organic growth and active partner conversations. The relevant metric is not just user count, it is the quality of what has been built and who is already engaging with it.

1,000+	7	2	Active
Organic Users	**Live AI Modules**	**Strategic Partnerships**	**Insurer Conversations**
Zero paid acquisition	Fully deployed today	InsurTech UK + SADAH.uk	Pipeline ahead of this raise

Strategic Partnerships

Partner	Type	Commercial Significance
InsurTech UK	Industry body partnership	Direct introductions to UK insurance decision-makers. Accelerates commercial conversations and regulatory credibility.
SADAH.uk	Clinical integration partner	UK dietary and nutrition specialist organisation. Validates CliqHealth's clinical nutrition pathways.
Active Insurer Conversations	B2B pipeline	Multiple UK insurers in active conversation. Not yet contracted, this raise converts the pipeline to signed pilots.

Evidence Base

CliqHealth's prevention model is supported by comparable outcomes from digital health prevention programmes:

- 24% reduction in overall healthcare costs in comparable digital preventive health deployments
- 36% fewer unplanned hospital admissions in insurer-sponsored prevention programmes
- 68% of Type 2 diabetes cases preventable or delayable through structured lifestyle intervention
- 3x better dietary adherence with AI-personalised nutrition versus generic apps
- 18 to 24% improvement in gym member retention when clinical-grade health tools are integrated

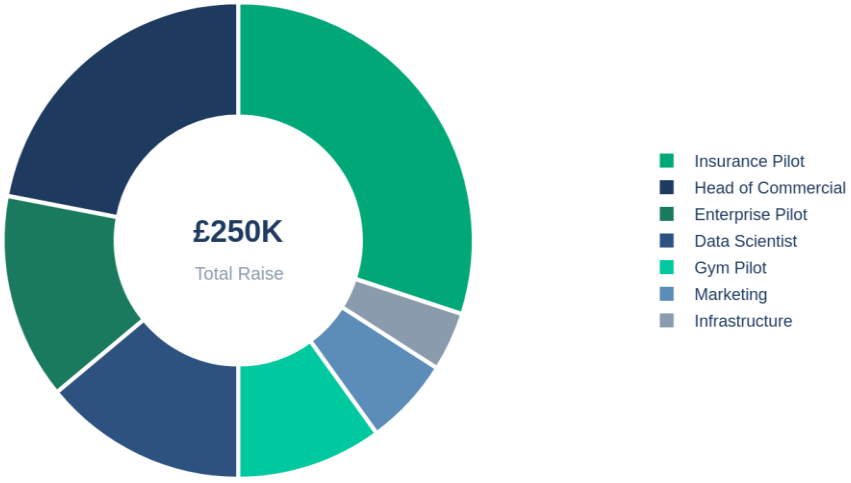

08 Use of Funds

The £250,000 raise is structured around a single goal: executing paid pilots across three B2B channels within 12 months. The platform is already built. This is a pure commercial rollout raise. 90% of funds are directed at pilot execution, commercial headcount, data infrastructure, and B2B marketing. There is no product development spend. There is no speculative allocation.

Allocation	Amount	%	Purpose
Insurance Pilot	£75,000	30%	Execute 90-day POC with 2 UK insurance partners at 2K-5K members each
Head of Commercial	£55,000	22%	12-month salary for senior commercial lead owning all three B2B channels

Allocation	Amount	%	Purpose
Enterprise Pilot	£35,000	14%	Execute 90-day POC with enterprise employer at 2K-5K employees
Data Scientist	£35,000	14%	12-month hire building outcomes reporting dashboards for insurer requirements
Gym Pilot	£25,000	10%	Execute 90-day POC with gym/wellness chain at 2K-5K members
Marketing	£15,000	6%	B2B-targeted: conference attendance, case studies, partner materials
Infrastructure	£10,000	4%	Cloud scaling and API integrations to support pilot-level load
TOTAL	£250,000	100%	90% directed to pilot rollout and the people who will close it

Use of Funds | £250,000 Raise

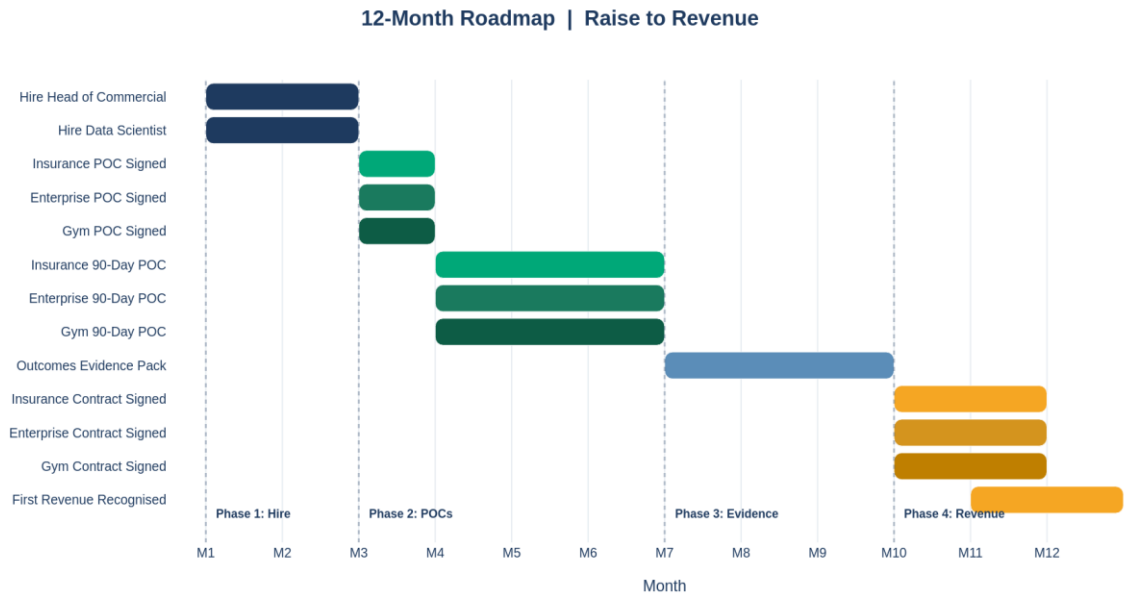

Zero Development Spend

This raise contains zero allocation to product development. The platform is fully built. Every pound goes to commercial execution: hiring the people who will close the pilots, running the pilots themselves, and building the outcomes evidence that converts pilots to long-term contracts. This is the most capital-efficient raise possible.

08.5 12-Month Roadmap — Raise to Revenue

From close of raise to first paid contracts across all three B2B channels: 12 months. The roadmap runs three parallel workstreams, Insurance, Enterprise, and Gym/Wellness each moving through Activation, Pilot Delivery, and Commercial Conversion phases. Insurance is the primary value driver; all three channels activate simultaneously.

Ph ase 1: Activation (Months 1 to 3)

- Months 1 to 2: Hire Head of Commercial and Data Scientist. Onboarding and pipeline prioritisation.
- Month 3: Insurance POC agreements signed with 2 UK insurer partners (2K-5K members each).
- Month 3: Enterprise POC agreement signed with first employer partner (2K-5K employees).
- Month 3: Gym/Wellness POC agreement signed with first gym chain (2K-5K members).

Phase 2: Pilot Delivery (Months 4 to 9)

- Months 4 to 6: 90-day POCs live across all three channels simultaneously.
- Outcomes data captured across diabetes prevention, CVD, and cancer survivorship pathways.
- Data Scientist builds partner-specific outcomes reporting dashboards.
- Months 7 to 9: Evidence pack compiled. Outcomes data presented to all three channel partners.

Phase 3: Commercial Conversion (Months 10 to 12)

- Months 10 to 12: Insurance contracts signed, transitioning from 90-day POC to 12-month paid contract.
- Enterprise and Gym channel contracts signed. Revenue recognised from Month 11.

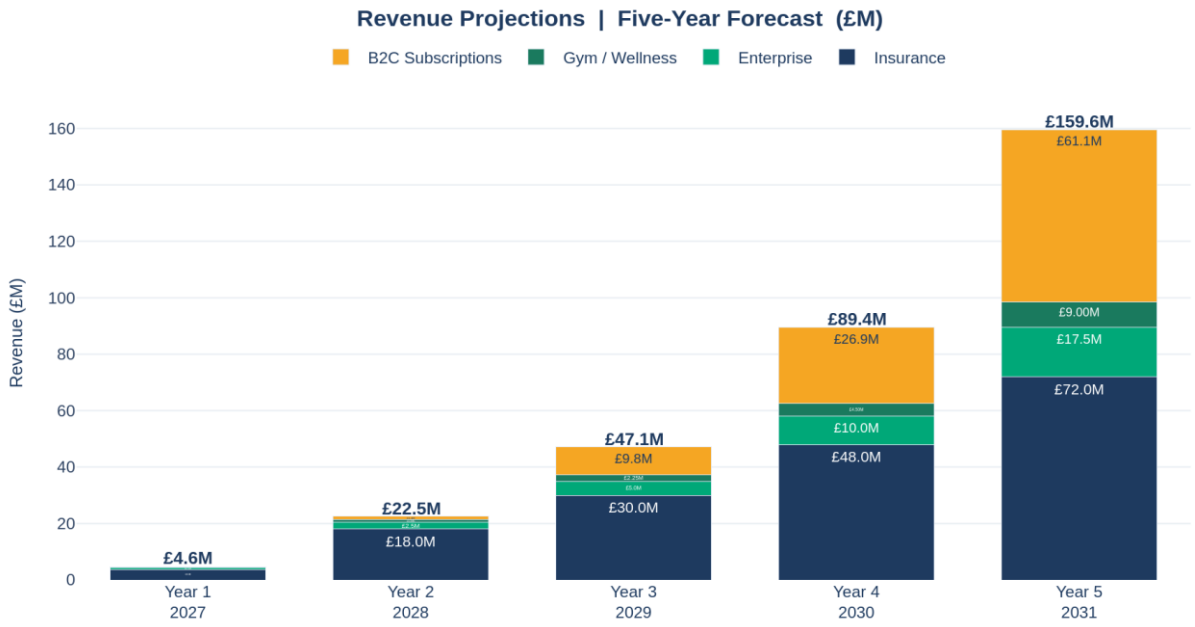

- Second insurer pipeline activated via InsurTech UK introductions.
- Series A preparation begins. Target: £2M to £3M based on pilot evidence.

Q1 2027: Women's Health Module

The Women's Health module is planned for Q1 2027, following the first paid commercial contracts. It is not part of this raise, not part of the 12-month plan, and not included in Year 1 revenue projections. It is a significant planned expansion that broadens the platform's addressable market once the core commercial foundation is established.

09 Revenue Projections

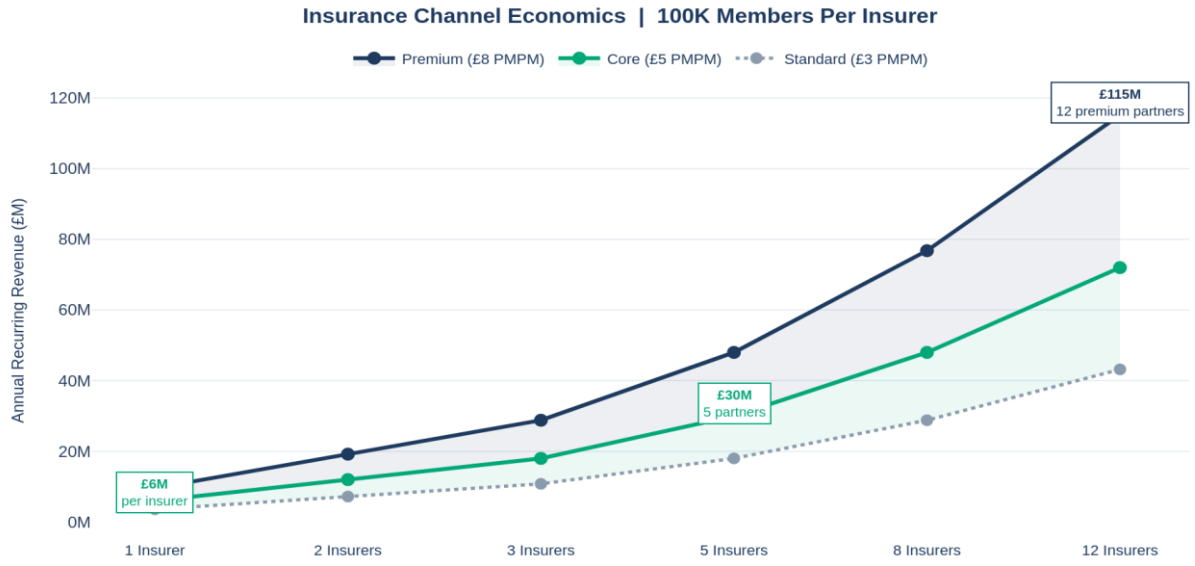

Revenue projections are based on the three-channel pilot conversion model. Year 1 revenue reflects a 50% realisation rate, accounting for the 90-day free POC period across all channels. From Year 2, all three channels generate full-year contracted revenue.

Year	Insurance	Enterprise	Gym / Wellness	B2C	Total Revenue
Year 1 (2027)	£3.6M	£750K	£180K	£70K	£4.6M
Year 2 (2028)	£18.0M	£2.5M	£900K	£1.1M	£22.5M
Year 3 (2029)	£30.0M	£5.0M	£2.25M	£9.85M	£47.1M
Year 4 (2030)	£48.0M	£10.0M	£4.5M	£26.9M	£89.4M
Year 5 (2031)	£72.0M	£17.5M	£9.0M	£61.1M	£159.6M

Projection Assumptions

Year	Insurance Partners	Enterprise Employees	Gym Members	Key Driver
Year 1 (2027)	2 x 100K (50% realisation)	25,000	10,000	90-day POCs converting to first contracts
Year 2 (2028)	3 x 100K (full year)	50,000	25,000	Contract renewals + 1 new insurer partner
Year 3 (2029)	5 x 100K	100,000	75,000	Series A deployment + international scale prep
Year 4 (2030)	8 x 100K	200,000	150,000	National insurer relationships + enterprise chains
Year 5 (2031)	12 x 100K	350,000	300,000	European expansion initiated

10 Financial Performance

CliqHealth is pre-revenue at the point of this raise. Platform costs are minimal the infrastructure is already running, serving 1,000+ users. The financial model shows Year 2 as the first year of meaningful profitability, driven by insurance contract conversions.

Metric	Year 1	Year 2	Year 3	Year 4	Year 5
Revenue	£4.6M	£22.5M	£47.1M	£89.4M	£159.6M
Gross Profit (~75%)	£3.45M	£16.9M	£35.3M	£67.1M	£119.7M
Operating Expenses	£4.25M	£10.4M	£11.1M	£9.2M	£3.4M
Operating Profit / (Loss)	(£800K)	£6.5M	£24.2M	£57.9M	£116.3M
Operating Margin	(17%)	29%	51%	65%	73%

Unit Economics

Metric	Insurance	Enterprise	Gym / Wellness
PMPM Revenue	£5 (core tier)	£6 (average)	£4 (average)
Annual Revenue per User	£60	£72	£48
Gross Margin per User	~75%	~75%	~75%
Expected Annual Churn	8 to 12%	12 to 15%	18 to 22%
LTV at Core Pricing	£240 (4yr average)	£252	£192

11 Competitive Landscape

The preventive health market is served by fragmented point solutions focused on a single condition, a single modality, or a single user type. No current platform integrates clinical nutrition, fitness, mental health, diabetes, cardiovascular health, cancer survivorship, and medication management within a single AI-driven ecosystem with insurer-grade outcomes reporting across three B2B channels.

Feature	CliqHealth	Livongo / Teladoc	Noom	Hims & Hers	Neko Health
Diabetes Prevention	Yes	Yes	Partial	No	Yes
CVD Prevention	Yes	Yes	No	No	Yes
Cancer Survivorship	Yes	No	No	No	No

UK-Market Native	Yes	No	No	No	Partial

Comparable Company Valuations

Company	Valuation	Stage	Relevance
Livongo Health	$18.5B (Teladoc, 2020)	Post-IPO	Diabetes + chronic condition management at scale
Neko Health	$7B (2024, private)	Series B	AI preventive health scanning, UK/EU market
Noom	$3.7B (2021)	Series F	Behavioural health + nutrition, primarily B2C
Hims & Hers	$4.5B+ (NYSE, 2024)	Post-SPAC	Digital health subscription, US market
CliqHealth	£2.5M post-money TODAY	Pre-seed	Entered at 63% below 2026 pre-seed median

The Moat

CliqHealth's competitive moat is breadth plus depth plus channel reach. Seven clinically coherent modules sharing a unified AI personalisation engine, generating outcomes data deployable across insurance, enterprise, and gym/wellness channels simultaneously. Point solutions cannot replicate this. Incumbents built for a single condition cannot pivot here. The moat is the architecture.

12 Team

CliqHealth is founded by a team with deep enterprise technology, digital health, and commercial expertise. The founding team brings 12+ years of AWS and Deloitte experience, combining data architecture, AI implementation, and commercial strategy.

Christy Samuel

Founder and CEO

12+ years at AWS and Deloitte. Data architecture, AI implementation, enterprise commercial strategy. Cancer survivor. £50K personal investment. Zero salary. Built the entire platform without external funding.

Key Hires This Raise

Head of Commercial (£55K — 22% of raise)

Senior commercial professional with B2B SaaS healthcare sales experience. Owns all three pilot channels.

Data Scientist (£35K — 14% of raise)

Health data specialist building the outcomes reporting infrastructure required by insurer and enterprise partners.

Christy brings a rare combination: the technical depth to build a seven-module AI platform without a development team, the enterprise commercial experience to understand how insurance and employer contracts are negotiated, and the personal motivation that no competitor can replicate. CliqHealth is not a pivot or a side project. It is the product of a cancer survivor building the platform he needed and could not find.

13 Social Impact

CliqHealth is a commercial healthcare platform with a deliberate social purpose built into its architecture from day one. The social impact is not a marketing addition it is embedded in how the product works.

Cancer Giving Back

A meaningful portion of every CliqHealth subscription supports UK cancer charities, chosen by the user. Embedded in the product from day one. Driven by the founder's own journey through cancer treatment.

Food Waste Reduction

The fridge/pantry AI feature generates meals from ingredients already at home. The UK wastes 9.5 million tonnes of food annually. CliqHealth directly reduces that waste at the household level while improving dietary adherence.

NHS Burden Reduction

Every diabetes case prevented saves the NHS £14,000 over five years. Every avoided cardiac admission saves £6,800. At 100,000 active prevention users, CliqHealth could save the NHS over £50M annually in deferred treatment costs.

The social impact is also a commercial differentiator. Insurers and employers face growing pressure to demonstrate ESG commitments — a platform that prevents disease, reduces food waste, and funds cancer charities through normal product usage is exactly the kind of partnership that goes on an annual report.

14 Valuation and The Ask

CliqHealth is raising £250,000 for 10% equity at a £2.5M post-money valuation. This is a deliberately conservative entry point, designed to be compelling for both angel investors and early-stage venture capital.

Term	Detail
Raise Amount	£250,000
Equity Offered	10%
Pre-Money Valuation	£2.25M
Post-Money Valuation	£2.5M
2026 Pre-Seed Median	£6.7M post-money
Discount vs Median	63% below median
Instrument	Ordinary shares
Target Close	Q4 2026

63%

Below Pre-Seed Median

Entry vs £6.7M 2026 median

£159.6M

Year 5 Revenue

Conservative three-channel model

34x

Revenue Multiple

Year 5 vs £2.5M post-money

Why This Is the Right Entry Point

- The product is built. No development risk. No technical execution risk.
- 1,000+ organic users already on the platform. Organic traction without spending a pound.
- Active insurer conversations. InsurTech UK pipeline. SADAH.uk integration in place.
- Founder has already committed £50K personal capital and drawn zero salary.
- £2.5M post-money is 63% below the 2026 pre-seed median — investors enter before the evidence is priced in.
- Year 1 revenue of £4.6M would put the company at a 1x revenue multiple. Seed round re-price at 10 to 15x revenue is the realistic outcome.

What Happens After This Raise

- Month 12: First paid insurance, enterprise, and gym contracts signed. Revenue recognised.
- Q1 2027: Series A preparation based on three-channel pilot evidence.
- Target Series A: £2M to £3M at a significantly higher valuation based on contractual revenue and multi-channel proof.
- Q1 2027: Women's health module development begins with Series A capital.

The Straight Truth

CliqHealth is not a concept. The platform is built. It is live. It has 1,000+ real users acquired without spending a single pound on marketing. Active conversations are underway across all three B2B channels. This raise gives investors an exceptional entry point into a live, revenue-ready platform with a $375B+ addressable market, three simultaneous commercial channels activating within 12 months, and a founder who has already put his money and health on the line to prove it.

Investment Summary

Raising **£250,000** for **10% equity** at a **£2.5M post-money valuation.**

Seven modules. Three channels. One thousand users. Zero paid marketing. One founder who bet everything.

www.cliqhealth.ai | contact@cliqhealth.ai; christysamuel@cliqheath.ai
