PRODUCT OVERVIEW / OCTOBER 2026

CliqHealth

Your Health. One Cliq Away.

A personal health companion connecting food, health signals and everyday habits - so people can take practical steps and follow their progress over time.

NUTRITION HEALTH PATHWAYS TRACKING

Built from lived experience. Designed for real life.

THE IDEA

Health is connected. Support should be too.

CliqHealth brings everyday health decisions into one personalised experience - from what someone eats to how they feel, move, sleep and progress.

01

FOOD

Meals, ingredients, recipes and nutrition.

02

BODY

Activity, weight, hydration and sleep.

03

HEALTH

Biomarkers, records, symptoms and goals.

04

GUIDANCE

Christy AI, plans, reminders and progress.

One joined-up loop: Scan or log -> understand -> take a practical next step -> review progress -> adapt.

HEALTH PATHWAYS

One app. Multiple health pathways.

People can choose a focus that reflects their goals and health context. A pathway-aware dashboard helps make the experience more relevant.

DIABETES

Food, glucose context, habits and ongoing self-management.

CARDIOVASCULAR

Heart-health habits across food, movement, sleep and tracking.

CANCER RECOVERY

Everyday wellbeing and nutrition support alongside clinical care.

WOMEN'S HEALTH

PCOS/PCOD, cycle-aware needs and changing life stages.

LONGEVITY

Biomarkers, recovery, metabolic health and healthy ageing.

GENERAL WELLBEING

Weight, muscle gain, fitness, shift work, gluten-free and sustainable eating goals.

A person may select more than one pathway; onboarding can be skipped or completed later.

FOOD INTELLIGENCE

Know what is on the plate - and in the kitchen.

CliqHealth makes food capture easier, then connects meal information to goals, preferences and condition-aware guidance.

NutriScan

Photo-based meal and nutrition scanning.

Calorie Checker

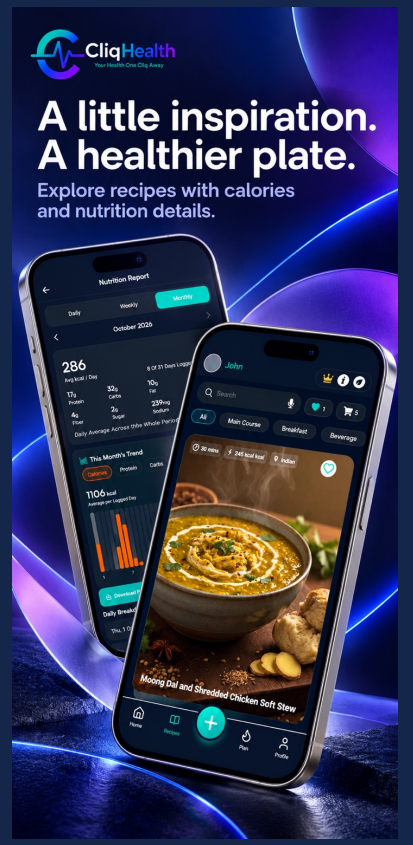

Review calories, macros and portions; edit entries.

Fridge + Pantry

Find meal ideas using food already at home.

Barcode + Manual

Scan packaged foods or add items yourself.

MEALS / CALORIES / FRIDGE / PANTRY

RECIPES & PLANNING

From ingredients to a plan that fits your week.

Recipes and meal planning help make healthy choices practical, personal and easier to repeat.

Plan around the person.

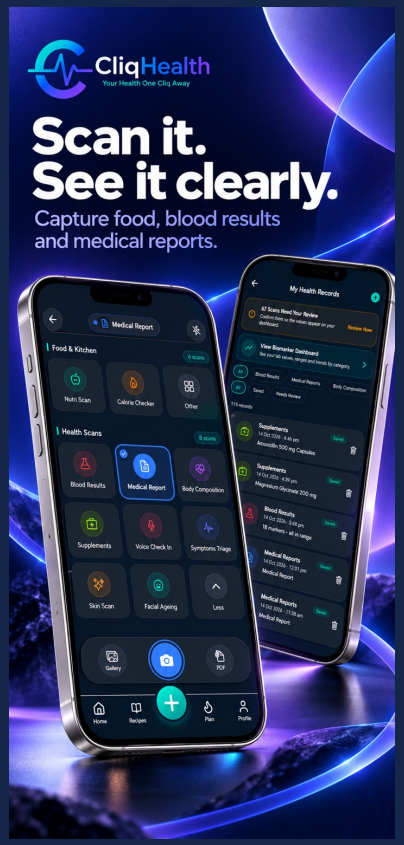

- Weekly plans shaped by pathway, nutrition targets, taste and preferences.
- Explore a 30,000+ recipe catalogue across breakfast, lunch, dinner, snacks and drinks.
- Import family or social recipes; save favourites and plan leftovers.
- Edit portions and nutrition entries; review calorie and meal details.
- Pantry-aware suggestions can help make better use of food already available.

Recipes, planning and food tracking in the same journey.

HEALTH SCAN CENTRE

A clearer place for health information.

A shared scan experience can capture food and health inputs, preserve them in context and make them easier to revisit.

- Blood results and biomarker reports
- Medical reports and documents
- Supplements and medicines
- Body composition and weight
- Symptoms and voice check-ins
- Skin and facial-age scans
- Meal, barcode, fridge and pantry scans

Scan -> review -> edit -> save. Keep sources, dates and user corrections visible.

BIOMARKERS & LONGEVITY

See a health story over time.

Longitudinal records and trend views help people notice what has changed and bring useful context to their next conversation.

A broader health picture

- Manual biomarkers and saved blood results
- Trends across metabolic health and inflammation
- Recovery, nutrition adherence, sleep and stress
- Body composition, weight and activity context
- Longevity Score and Biological Age concept

Score methodology and clinical interpretation remain subject to validation.

DAILY HEALTH SIGNALS

Bring activity and wearable data into the picture.

Tracking can combine a person's own logs with connected device signals to support a more useful, day-to-day view.

ACTIVITY

Exercise, steps and movement

SLEEP

Duration, rhythm and trends

HYDRATION

Water intake and reminders

WEIGHT

Progress and body goals

HEART

Heart rate and related signals

RECOVERY

Rest, stress and daily energy

Website-described: Apple Watch and Samsung Health. Integration roadmap: Oura, WHOOP, Garmin, Polar, Fitbit, Withings, Dexcom, Libre, Eight Sleep and Hume.

CHRISTY AI

Meet Christy. Just ask.

A conversational AI health companion designed to make the app feel personal and help with everyday logging, questions and habit support.

A more natural way to use health tools

- Ask for guidance in the context of goals, food and chosen pathways.
- Use voice to log meals or water and complete check-ins.
- Get prompts and optional sound reminders for meals, hydration, supplements and medicines.
- Voice playback and voice-biomarker analysis are evolving capabilities.

Supportive guidance, not diagnosis. Christy is not a substitute for a clinician or emergency service.

YOUR DAILY DASHBOARD

A plan that responds to what matters to you.

Pathway-aware dashboards bring goals, measures and practical next steps together in a simple daily view.

Track and act

- Personalised recommendations and daily checklist
- Nutrition, calories, portions and meal adherence
- Exercise, weight, hydration, sleep and recovery
- Progress score, trends and tailored milestones
- Community, achievements and profile controls
- Notifications with user preferences and quiet hours

Small actions, reviewed over time.

PROGRESS SHARING

Make it easier to bring your story into the room.

Clear summaries can help people organise their records and share selected progress with a clinician.

A useful health summary can include

- Daily, weekly and monthly nutrition summaries
- Biomarker results with dates and trend context
- Activity, sleep, hydration and weight progress
- Saved reports and clinician-friendly PDF exports
- Personal notes, symptoms and questions to discuss

Clinicians remain responsible for diagnosis, treatment and care decisions.

PRODUCT CAPABILITY MAP

A platform that keeps expanding with the person.

CliqHealth combines a clear everyday app experience with a broader set of health inputs and pathway capabilities.

CORE APP

Everyday experience

NutriScan, recipes, fridge and pantry ideas, weekly planning, nutrition and activity tracking, Christy AI and reminders.

HEALTH RECORD

Health information

Blood results, medical reports, supplements, symptoms, body composition, manual biomarkers and shareable progress.

EVOLVING

Expanding capabilities

Advanced wearable and CGM connections, diagnostic inputs, longevity scoring, voice biomarker analysis, family sharing, an AI health twin, clinician messaging, appointment reminders, education and deeper sleep / recovery tools.

Potential diagnostic inputs include AGE Reader, TruAge, GlycanAge, REMS, Tanita, body composition, bone-density, DNA, BrainAge, RMR and microbiome reports. Guided scan instructions and access depend on validation, integration and product release.

HOW CLIQHEALTH IS DESIGNED

Personalised support, with people in control.

Health tools should make information easier to use while keeping clinical decisions with qualified professionals.

PERSONAL

Use a person's goals, preferences and selected context.

CLEAR

Show where information came from and when it was captured.

CORRECTABLE

Allow users to review and edit scanned or estimated information.

HUMAN-LED

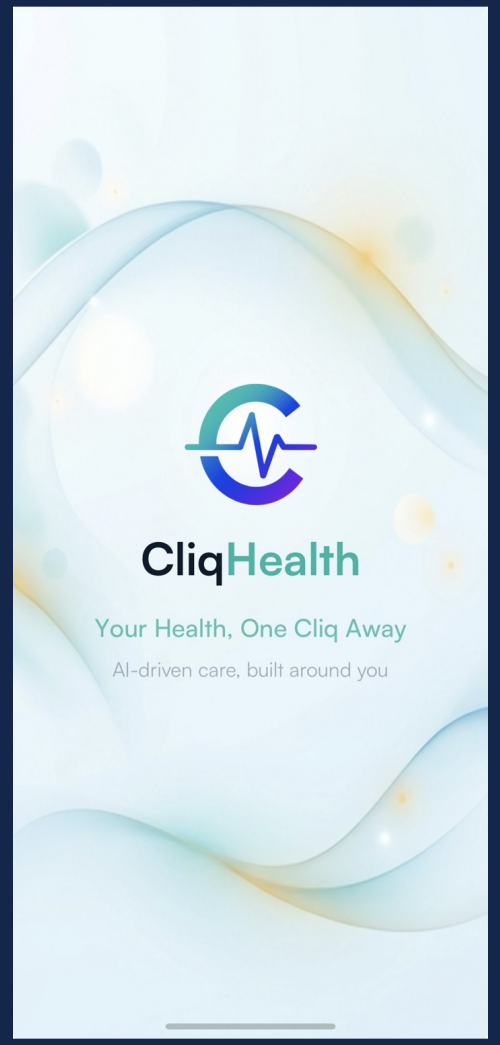

Support care conversations; do not diagnose, prescribe or replace clinicians.

Privacy controls: consent, MFA, role-based access and audit trails. AI insights need context and validation.

BUILT FROM LIVED EXPERIENCE

Your health.
One Cliq away.

CliqHealth connects food, health signals and everyday habits - helping people take practical steps and understand their progress over time.

Christy Samuel

Founder, CliqHealth | A personal cancer journey inspired a more connected approach to everyday health support.

CLIQHEALTH.AI

Product visuals are illustrative. Feature availability may vary by release. AI guidance supports wellbeing and does not replace professional medical advice.
